Talk to our team today about saving money on your managed print services

TELEPHONY / VOIP & RELATED HARDWARE

IP Telecom Systems Voice Over IP, Low Cost

The most attractive feature of VoIP is its cost saving potential. After the initial setup cost, significant net savings can be achieved by managing a single network rather than separate phone and data networks. As we move away from public switched telephone networks, calls, particularly long distance calls, become very inexpensive.

An IP PBX or IP telephone system consists of one or more IP phones, an IP PBX server and optionally a VoIP gateway to connect to existing PSTN lines. The IP PBX server functions in a similar manner to a proxy server, SIP clients, being either soft phones or hardware-based phones, register with the IP PBX server, and when they wish to make a call they ask the IP PBX to establish the connection.

The IP PBX has a directory of all phones/users and their corresponding SIP address and thus is able to connect an internal call or route an external call via either a VoIP gateway or a VoIP service provider

BROADBRAND SERVICES

Our Specialist broadband services are scalable for businesses of all sizes, it boasts a robust, IP- based, highly secure distributed architecture coupled with our full range of IP WAN connectivity services, Voice/SIP trunks and low cost Call Termination services, all supported by our in-house helpdesk, systems development team and country wide engineering services.

We deliver clients the best mix of affordability, ease of use and significant enhancements to productivity & efficiency.

Every set up is different so talk to us today about your broadband requirements.

SUPPLY & INSTALLATION

Network Planning & Design

WestTech Technologies has experience in vertical and horizontal connectivity projects spanning a wide variety of industrial and commercial network cabling applications, as well as expertise in all aspects of network topologies and LAN solutions such as: CAT 5e, CAT 6 and Fiber Optic network design. Our design incorporates important aspects like cross talk, bandwidth consideration, cable conformance, calculation of transmission error rates and important details often overlooked such as fire stopping and cable management.

Whether upgrading current cabling networks, relocating offices or upfitting facilities, WestTech has the experience and capabilities to provide your IT staff with an accurate scope of work, bid drawings and RFP documents that will eliminate costly change orders as the project unfolds.

SECURITY NETWORKING & MONITORING

Next Generation RMM Tools

WestTech implements a remote monitoring and management (RMM) tool on all of our managed service IT customers devices. Our RMM tool is fully-featured, secure, cloud-based platform which enables us to remotely monitor, manage, and support every endpoint under contract, reducing cost and increasing service delivery efficiency.

SECURE ENDPOINT PROTECTION

Protect your company against malware and ransomware Enterprises' increasing dependence on technologies, as well as their exposure to new types of malware that endanger their security, requires new approaches to security to help reduce the impact of possible attacks. Panda Endpoint Protection is a complete, advanced security solution for desktops, laptops and servers. It centrally manages the security of endpoints both inside and outside the corporate network.

Our service provides a set of EPP technologies to control malware, ransomware and threats that leverage unknown (zero-day) vulnerabilities. There is no need to install or maintain new hardware resources on the enterprise's infrastructure. Moreover, the lightweight agent has no impact on endpoint performance and is accessible via a single web console, simplifying security management and increasing operational efficiency.

BUSINESS CONTINUITY | CLOUD STORAGE | RANSOMWARE PROTECTION | BACKUP | DISASTER RECOVERY

Business Continuity Services

Backup Isn't Enough, you Need Business Continuity Today's businesses need more than just backup. Our solutions offer complete BCDR solution designed to get your clients' business back up and running when disruptions occur.

Comprehensive Product Suite

We cover all of your business continuity & disaster recovery needs. Protect servers, files, PCs, and SaaS applications and customise a solution tailored to your exact needs. With software and hardware suitable for business of all sizes, WestTech has you covered.

OFFICE CCTV | ACCESS CONTROL SYSTEMS

CCTV

We supply and install both Analogue and Digital IP CCTV Systems. Along with Cameras, DVRs and Monitors Utilising existing IP networks.

All businesses with IP-based computer networks with connections to the Internet can easily integrate their security system to their network. IP cameras can simply be added to such networks, extending its functionality to include video.

Video monitoring IP cameras and recorded video footage can be viewed using computers on the local network, or remotely via the Internet. User access can be limited by using passwords and IP filtering, and video can be encrypted for additional security.

Video encoders

Existing analogue CCTV cameras do not have to be wasted. The analogue output of CCTV cameras can be digitised using video encoders, enabling the video signals to be send over IP networks.
